Biotin Anti-Human CD298 Antibody

Catalog Number:	109101, 109102
Size:	25 ug, 100 ug
Target Name:	CD298, ATPB-3, Na, K-ATPase beta-3 polypeptide
Regulatory Status:	RUO

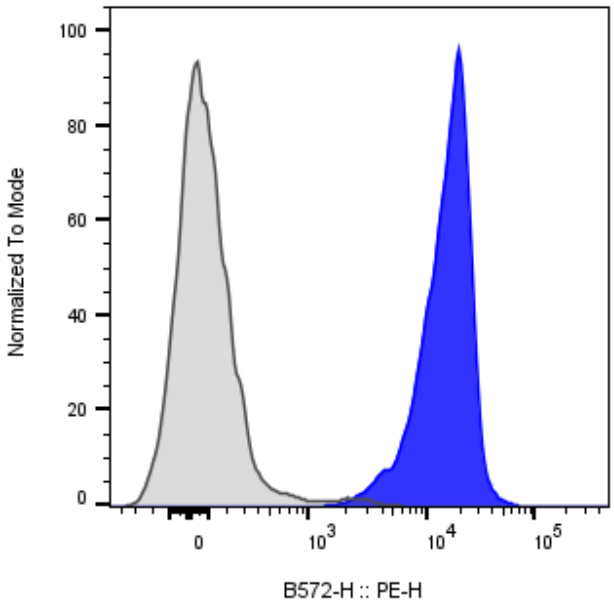

PRODUCT DETAILS

Clone:	LNH-94
Application:	Flow Cytometry
Reactivity:	Human
Format:	Biotin
Isotype:	Mouse IgG1
Antibody Type:	Monoclonal
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA
Protein Concentration:	0.2 mg/mL
Storage and Handling:	The antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. Do not freeze.
Recommended Usage:	For flow cytometric staining, it is recommended to use less than 0.1 µg of this reagent per 0.5-1.0 million cells in a 100 µL volume. Optimal reagent performance should be determined by titration for each specific application. For detection, use a secondary reagent with this product.
Isotype Control:	301425
RRID:	AB_3738883

BACKGROUND INFORMATION

CD298, also known as the sodium/potassium-transporting ATPase subunit beta-3 or ATP1B3, is a 42 kDa type II transmembrane glycoprotein encoded by the ATP1B3 gene in humans. It is part of the Na^+/K^+-ATPase enzyme complex, which consists of a catalytic α subunit and a regulatory β subunit. CD298 belongs to the family of Na^+/K^+ and H^+/K^+ ATPase beta chain proteins and specifically to the Na^+/K^+-ATPase subfamily. This integral plasma membrane protein is essential for establishing and maintaining the electrochemical gradients of sodium and potassium ions across the cell membrane—gradients that are crucial for osmoregulation, sodium-coupled transport of various molecules, and the electrical excitability of nerve and muscle cells. The β3 subunit plays a regulatory role by assisting in the proper assembly and membrane localization of the α/β heterodimer complex. CD298 is broadly expressed across various tissues, including all leukocyte populations.

PRODUCT DATA

Human peripheral blood lymphocytes stained with Biotin Anti-Human CD298 clone LNH-94 (blue histogram) or an isotype control (gray histogram), followed by SA-PE.
